V. CLIMATOLOGY

25X1

[redacted] August and September

25X1

A. GENERAL: The summer southwest monsoon is in full force [redacted] during August and the first half of September. The weather follows a regular pattern of cloudy conditions with afternoon showers occurring over parts of the area almost every day. Traces of the northeast monsoon begin to appear late in September, but the areas affected are generally north of 16° N in Laos. The onset of the northeast monsoon will normally show a decrease in cloudiness over northern Laos and North Vietnam.

B. CLOUDINESS: Mean cloudiness

25X1

[redacted] in August and early September is more than 80 per cent except for the extreme northern tip of Laos. Mission will be flown only when weather forecast indicates probability of successful accomplishment. Only one day per month would be expected to have less than 3/10 cloud cover for a given location. During the last half of September, mean cloudiness normally decreases to 60 to 70 per cent cover to the north of 16° N in Laos. The number of days with 3/10 or less cloud cover for given targets in Laos increases to two days in the south and four days in the north.
